# About Blackline Energy

Blackline Energy delivers specialist operational support, asset integrity services, and end-of-life decommissioning solutions to the oil and gas industry. We partner with asset owners to manage infrastructure across its entire lifecycle — from development and daily operations through to rehabilitation and permit relinquishment.

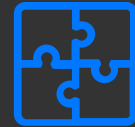

Our disciplined approach blends technical expertise, field capability, and regulatory insight to deliver safe, compliant, and efficient outcomes in every environment

# Our Value Proposition

## **Lifecycle Stewardship**

Supporting assets from commissioning to closure.

## **Regulatory Confidence**

Clear alignment with Australian standards and industry frameworks.

## **Operational Discipline**

Structured execution, rigorous safety, and proven field capability

## **Sustainable Outcomes**

Environmentally responsible decommissioning and rehabilitation.

# CORE CAPABILITIES

## Operations & Maintenance Support

- MIC detection, testing, and evaluation
- Cathodic protection monitoring, surveys, maintenance, and system audits
- Gas leak survey and detection
- Mechanical and vacuum excavation
- Pipeline coating inspection and repair
- Pipeline pigging
- ROW patrols
- Depth-of-cover assessments
- Vegetation management
- In-service valve maintenance
- Resource support for hydrocarbon processing, compression, and distribution facilities
- Technical and operational support for well integrity and assurance
- Permit / JSEA/SOP development
- SiteLook™ – 360° visibility for complex worksites
- Procurement advisory

## Engineering & Professional Services

- Subsurface, mechanical, electrical, pipeline, and civil engineering
- Regulatory compliance management, mapping, and audit support
- Technician and operator training programs
- Risk assessment and control implementation
- QA/QC Checks
- Factory acceptance testing representation
- Development of operating envelopes, process safety limits, and critical parameters
- Root cause analysis for process upsets, reliability issues, and equipment failures
- Process simulations and modelling (steady-state and dynamic)
- Technical authority support for Management of Change (MOC)
- Process safety engineering input into risk assessments and barrier management
- Debottlenecking studies and throughput improvement assessments
- Engineering support for commissioning, start-up, and shutdown planning
- Brownfield modification scoping, process calculations, and engineering deliverables
- Review and approval of vendor packages, datasheets, and process documentation
- Development of procedures, operating philosophies, and process narratives
- Field support for troubleshooting abnormal operations and process deviations
- Lifecycle asset management input — integrity, operability, and optimisation
- Mentoring and capability uplift for junior engineers and operations teams

## Decommissioning, Rehabilitation & End-of-Life Services

- Decommissioning planning and execution
- Asset retirement and rehabilitation
- Permit relinquishment and regulatory close-out
- Field execution with strict safety and environmental controls
- Waste management, site remediation, and stakeholder engagement
- Plant and Equipment Hire
- Water Sampling
- Soil testing
- Weed and Seed Certifications
- Water trucks and Rig Support
- Fencing
- Lease Pad construction
- Asset integrity planning and lifecycle strategy
