ABOUT BLACKLINE ENERGY

Blackline Energy delivers specialist engineering, operational support, asset integrity management, and end-of-life decommissioning services across Australia and the Pacific. We support operators across offshore, onshore, pipeline, midstream, and industrial energy assets.

Our approach integrates engineering discipline with field capability, delivering safe, compliant, and technically robust outcomes throughout the full asset lifecycle, from commissioning and steady-state operations through to rehabilitation and permit relinquishment.

ASSET LIFECYCLE CAPABILITIES

- Commissioning
- Operations
- Integrity
- Engineering
- Decommissioning
- Rehabilitation
- Close-out

BUILT ON EXPERIENCE

Blackline Energy was established by experienced professionals who have spent their careers operating, maintaining and supporting Australia's energy infrastructure.

Our team has developed its expertise through decades of hands-on involvement in the field, with experience spanning frontline operational roles through to supervisory, asset management, engineering and senior leadership positions. Alongside this operational experience, our team offers specialist expertise in engineering, HSE, operational documentation and compliance systems, allowing us to support clients with knowledge developed through years of working directly with operating assets.

That background shapes the way we work. We understand the technical, operational and compliance pressures which come with managing critical energy assets because we've worked alongside the people, systems and field conditions which keep them operating safely and reliably.

Supported by our RPEQ engineering capability and extensive experience in developing operational documentation, procedures and compliance systems, Blackline Energy provides practical, technically sound support grounded in real-world operational experience.

Lifecycle Stewardship

Supporting assets from commissioning through to responsible closure.

Regulatory Confidence

Alignment with Australian standards, operator specifications, and industry frameworks.

Operational Discipline

Structured execution, rigorous safety systems, and proven field capability.

Sustainable Outcomes

Environmentally responsible decommissioning, rehabilitation, and stakeholder alignment.

OPERATIONS & MAINTENANCE SUPPORT

PIPELINE & FACILITY INTEGRITY

- MIC detection, sampling, and corrosion evaluation
- Cathodic protection surveys, maintenance, and audits
- Coating inspection, defect assessment, and repair
- Gas leak detection
- Depth-of-cover assessments
- ROW patrols and surveillance
- In-service valve maintenance

FIELD OPERATIONS & EXECUTION

- Mechanical and vacuum excavation
- Pipeline pigging (cleaning, gauging, ILI Prep)
- Vegetation management
- Facility operations support
- Well integrity and assurance
- Permit / JSEA / SOP development
- SiteLook™ digital worksite mapping
- Procurement advisory

ENGINEERING & PROFESSIONAL SERVICES

MULTIDISCIPLINARY ENGINEERING

- ▶ Mechanical, electrical, pipeline, civil, subsurface
- ▶ Process modelling (steady-state & dynamic)
- ▶ Operating envelopes & critical parameters
- ▶ Debottlenecking & throughput studies
- ▶ Brownfield modification scoping

TECHNICAL AUTHORITY & ASSURANCE

- ▶ MOC technical authority support
- ▶ QA/QC verification
- ▶ FAT representation
- ▶ Vendor package review & approval
- ▶ Lifecycle integrity & operability input

PROCESS SAFETY & RISK ENGINEERING

- ▶ Risk assessments & control implementation
- ▶ HAZOP & process safety studies
- ▶ Process safety engineering
- ▶ Root cause analysis
- ▶ Safety case support

OPERATIONAL SUPPORT & CAPABILITY UPLIFT

- ▶ Technician & operator training
- ▶ Operational diagnostics & troubleshooting
- ▶ Workforce development & mentoring
- ▶ Operational documentation and management systems
- ▶ Regulatory compliance support

DECOMMISSIONING, REHABILITATION & END-OF-LIFE SERVICES

PLANNING & EXECUTION

- Decommissioning strategy & regulatory submissions
- Rehabilitation assessment & planning
- Hazardous materials identification & disposal
- Isolation, dismantling, and asset removal
- Permit relinquishment & close-out

ENVIRONMENTAL & CLOSURE SERVICES

- Waste management & remediation
- Contaminated land assessment & remediation design
- Groundwater monitoring & management
- Erosion & sediment control
- Weed & seed certification

CLIENT OUTCOMES

While every project presents its own challenges, our clients' priorities remain the same.

Blackline Energy works alongside asset owners and operators to improve safety, reliability and operational performance through practical, technically sound solutions tailored to each stage of the asset lifecycle.

SAFETY

Safety-focused
outcomes / safer
operations

OPERATIONAL PERFORMANCE

Improved
operational
performance

RELIABILITY

Reliability-focused
outcomes / stronger
asset performance

SUSTAINABLE OUTCOMES

Sustainable
outcomes /
long-term value

At Blackline Energy, we measure our success by the success of our clients, delivering practical solutions which support safer operations, stronger asset performance and sustainable outcomes. Our focus is on building trusted relationships and delivering lasting value through every stage of the asset lifecycle.
